

IN THE CLAIMS:

Please amend the claims as follows:

Claims 1-19 (Canceled).

Claim 20 (Previously Presented): A terminal device comprising:

storage medium reproducing means for reading information data recorded in a storage medium that has recorded incomplete information data obtained by partly omitting complete information data designed to provide complete information;

reception means for receiving complementary information data to complement the incomplete information data thereby reconstructing original complete information data; and

combine means for combining the incomplete information data read from the storage medium reproducing means with the complementary information data received by the reception means to reconstruct the original complete information data.

Claims 21-31 (Canceled).

Claim 32 (New): The terminal device according to claim 20, further comprising:

replay means for performing a replay operation in accordance with data combined by the combine means.

Claim 33 (New): The terminal device according to claim 20, further comprising:
selection means for selecting at least one incomplete information data from a plurality of incomplete information data recorded in the storage medium in response to an operation made by a user; and

terminal transmission means for transmitting a request signal that requests an information administration device to send complementary information data corresponding to the at least one incomplete information data selected by the selection means.

Claim 34 (New): The terminal device according to claim 33, further comprising:
means for transmitting user financial information to the information administration device, so that the information administration device can perform a charging operation to transmission of the complementary information data to the terminal device in response to the financial information from the terminal device.

Claim 35 (New): The terminal device according to claim 34, wherein the user financial information is credit card information.

Claim 36 (New): The terminal device according to claim 20, wherein the storage medium is assigned a serial number representing a distribution source of the storage medium, and the terminal device further includes:

means for transmitting the serial number assigned to the storage medium to an information administration device.

Claim 37 (New): The terminal device according to claim 33, further comprising:
means for transmitting a notice of data combine completion to the information
administration device after the combine means completes the data combine operation.

Claim 38 (New): The terminal device according to claim 36, further comprising:
means for transmitting a notice of data combine completion to the information
administration device after the combine means completes the data combine operation.

Claim 39 (New): The terminal device according to claim 20, wherein the storage
medium records incomplete music data of songs as the incomplete information data such
that the incomplete music data has incomplete music files for the respective songs, the
storage means records complementary music files corresponding to the incomplete music
files for the respective songs as the plurality of complementary information data, the
combine means combines the incomplete music file with the complementary music file to
create a complete music file, and the terminal device includes replay means for replaying a
song in accordance with the complete music file created by the combine means.

Claim 40 (New): The terminal device according to claim 39, further comprising:
trail listening means for causing the replay means to replay the songs using the
corresponding incomplete music files for a trail listening purpose.

Claim 41 (New): The terminal device according to claim 39, wherein the storage medium stores music files of the respective songs for a trial listening purpose, and the terminal device includes trial listening means for causing the replay means to replay the songs using the corresponding music files for the trial listening purpose.

Claim 42 (New): The terminal device according to claim 39, further comprising:
display means for displaying a list of songs contained in each of the incomplete music files recorded in the storage medium.

Claim 43 (New): The terminal device according to claim 42, wherein the list of the songs is recorded as data in the storage medium.

Claim 44 (New): The terminal device according to claim 42, further comprising:
means for accessing an information administration device to receive and obtain the list of the songs from the information administration device.

Claim 45 (New): The terminal device according to claim 20, wherein the storage medium stores map data of a plurality of areas as the incomplete information data, the storage means stores map data addresses corresponding to the map data for the respective areas as the plurality of complementary information data, the combine means creates a map data file by combining the map data of a desired area with the corresponding map data

address, and the terminal device displays a map of the desired area on the basis of the map data file created by the combine means.

Claim 46 (New): The terminal device according to claim 45, further comprising:
a navigation device installed on a vehicle for detecting a current location of the vehicle, and displays a map corresponding to the current location of the vehicle detected by the navigation device.

Claim 47 (New): The terminal device according to claim 45, further comprising:
a navigation device installed on a vehicle for detecting a current location of the vehicle, and displays a map from the current location of the vehicle detected by the navigation device to a destination.
